Excellent electronic book and helpful one. It usually does not cost a lot of. I am quickly will get a pleasure of reading through a written publication.

ANALYSIS AND DESIGN OF RETAINING STRUCTURES AGAINST EARTHQUAKES: PROCEEDINGS OF SESSIONS SPONSORED BY THE SOIL DYNAMICS COMMITTEE OF THE GEOTECHNICAL ENGINEERING DIVISION IN CONJUNCTION WITH THE ASCE NATIONAL CONVENTION, WASHINGTON, D.C, NOVEMBER 10-14,

American Society of Civil Engineers, United States, 1996. Hardback. Condition: New. Language: English . Brand New Book. This proceedings, Analysis and Design of Retaining Structures Against Earthquakes , contains both invited and contributed papers, which focus on the questions of dynamic earth pressures on fixed and movable rigid and flexible walls; displacements in translation and rotation of walls under earthquakes; behavior of fills and abutments during earthquake; and centrifuge tests on walls. Both analytical and experimental data have been presented on possible behavior of retaining structures under seismic loading. A study of this volume and other published literature shows considerable effort is being devoted to determination of realistic dynamic pressures, displacement in translation and rotation of retaining structures and behavior of fills for abutments. Since a synthesis of these studies is not currently available, there are no unified and generally acceptable solutions to the above questions. However, the discussions and presentations of the papers during the session does highlight the need for such solutions and more definite descriptions of unsolved problems.
